

# Brown ADD vs. Brown EF/A: *What's changed?*

ADHD is a complex impairment that impacts academic, social, emotional, and behavioural development for both children and adults. The Brown Executive Function/Attention Scales™ is designed to evaluate executive functions related to ADHD in individuals ages 3 years and older.

## Administration & Scoring

|  |   |
|--|---|
| <ul style="list-style-type: none"> <li>• Scoring Assistant software or manual scoring</li> </ul>   | <ul style="list-style-type: none"> <li>• Q-global® web-based system or manual scoring</li> </ul>  |
| <ul style="list-style-type: none"> <li>• Two separate assessments and manuals               <ul style="list-style-type: none"> <li>• Brown ADD Scales for Children and Adolescents with forms for ages 3-7 and 8-12</li> <li>• Brown ADD Scales for Adolescents and Adults with forms for ages 12-18 and 18+</li> </ul> </li> <li>• Composite scores include an ADD Combined Total Score and an ADD Inattention Total Score</li> <li>• Examiner's Worksheet for comparing psychoeducational test scores</li> </ul> | <ul style="list-style-type: none"> <li>• Forms organized by type and age               <ul style="list-style-type: none"> <li>• Parent form for ages 3-7, 8-12, and 13-18</li> <li>• Teacher for ages 3-7 and 8-12</li> <li>• Self-Report for ages 8-12, 13-18, and 18+</li> </ul> </li> <li>• Total score simplification               <ul style="list-style-type: none"> <li>• The single <b>Total Composite</b> score available across all forms and age levels simplifies interpretation while making the results more consistent and comparable for individuals who may be evaluated across several age levels over time.</li> </ul> </li> </ul> |

## Content
