

Agile. Brief. Convenient.

Meet the new ESI-3!

The Early Screening Inventory you know— updated for today's children

Are your early learners developing as expected?

Determine if they are ready for the next level with a clear picture of visual motor/adaptive; gross motor; language; cognition; and social-emotional skills.

The Early Screening Inventory, Third Edition (ESI™-3) is an easy to use, individually administered developmental screener used to quickly identify possible delays across the key domains of English-speaking students.

As with the ESI-R™, the new ESI™-3 can be used in school and early childhood settings, goes beyond the indirect assessment strategies utilized by other tools, and relies primarily on direct observation of the student.

What's different about ESI-3?

In a nutshell, the ESI-3 now features available digital administration, scoring, and reporting, updated norms, and revised social-emotional and adaptive-behaviour content.

Feature	ESI-R	ESI-3
Web-based administration		✓
Web-based score report, and parent report with intervention recommendations		✓
2018 norms		✓
Remote web-based administration		✓
Up-to-date research in social-emotional and adaptive behaviour		✓
