

Revibe: Improve focus and collect behavioural data

Success starts and ends with focus

In a world of endless distractions, the ability to focus isn't just nice to have. It's the difference between thriving and just getting by, whether you're a student trying to learn, a professional meeting deadlines, or simply navigating daily life. As an integrated wearable and web-based app, Revibe® provides a research-based, personalized tool to improve and track focus, attention, and on-task behaviour.

Revibe bolsters engagement and self-regulation through specialized vibrations and messaging on a single-purpose assistive technology device. Even more, Revibe saves you time by:

- Collecting behavioural and self-report data
- Providing personalized insights
- Integrating schedule and reminder needs
- Generating assessment and progress monitoring reports

While leveraging the power of Samsung hardware, Revibe does not allow web browsers, text, calculator, or other apps. Active and passive data collection fuels deep analysis through an AI-enabled application, offering clinicians, educators, and caregivers actionable insights for informed decision-making, monitoring progress, and tailoring interventions for each user.

Collect data; build independence.

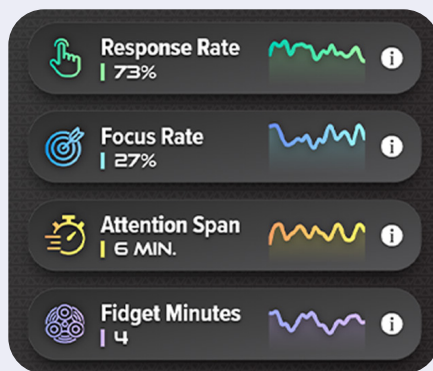

Revibe has two main uses:

1. **Assessment support:** Collect dynamic, authentic behavioural data for the evaluation process.
2. **Intervention/Instructional support:** Personalized vibrations and text reminders prompt self-awareness and build executive functioning to promote focus, attention, and independence.

Assessment:

Continuous, systematic observation

Problem

An assessment team has many evaluations to complete and would benefit from additional team members. However, they also can't spend as much time as they would like to complete authentic observations and data collection. Sometimes they feel like they don't gather enough external data, or their presence is distracting when directly observing the user being assessed.

Solution

The team uses Revibe to support real-time data collection in the classroom, at home, or in another setting. Multiple users can be added to a single device and within the app, with secure separation of data and reporting. The team decides when and where the data collection will take place and can track the usage and performance anytime, anywhere. Reporting is a single touch away, includes charts and graphs, and can be printed and integrated into larger reporting.

Intervention/Instruction:

A personal extension of support

Problem

It's clear that something is needed to help maintain focus and attention, but one question remains: Now what? A full-time 1:1 aide might be beyond what's possible, or perhaps there is a goal for skills in self-management. Or there is evidence that reminders might be helpful in independence building, but the methods to train these skills are unclear.

Solution

Revibe can be dedicated to a single user, integrating a schedule and set of reminders (e.g., bring your book home.) Even better, Revibe's core technology provides subtle vibrations at varying intervals and prompts the user to report whether or not they are on-task. The prompt frequency will personalize reminders based on responses, schedule needs, and history of the user. It literally learns the user's needs and offers the best set of prompts at the right times. Reporting is available for confirmation of success!

The evidence: Does Revibe really work?

The scientific evidence behind Revibe is ongoing and showing early significance. Published, peer-reviewed studies are available on our [website](#). More studies are in development, so be sure to check back often!

In addition, earlier versions of Revibe have shown success through nearly 40,000 devices in use and over 11 million hours of data recordings. The device has been well trained to provide advanced data and insights.

High-tech with a purpose — and that checks all the boxes

Pearson's Revibe has you covered.

- ✔ Data for reporting?
- ✔ Security and compliance requirements?
- ✔ Easy to use?

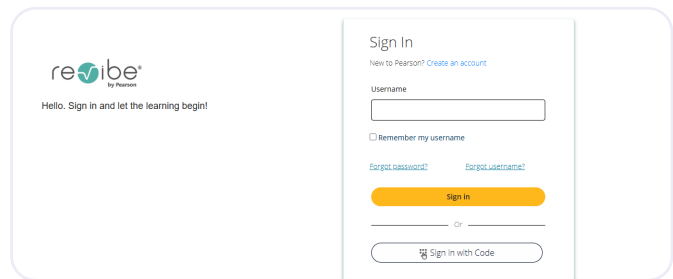

Reporting for real-time decision-making

Any good assessment provides data that is actionable. Revibe offers data visualizations and reports that can go into larger assessment reports or stand on their own. Personalized insights are fed into data that's right at your fingertips (e.g., "When Mia takes 1000 steps before noon, focus increases 17%.")

Data security and privacy for protection and compliance needs

Keeping your data and your clients' information safeguarded is our top priority. Security is built into Revibe through technical, administrative, and physical safeguards. Revibe includes a proprietary, web-based mobile application that connects the dedicated wearable device to cloud-based services using Wi-Fi when available.

Revibe is easy to use. Here's how it works!

Step 1: Set-up

The administrator enters the user's information, schedule, and activities into the app.

Step 2: Begin

The administrator places the paired device on the user's wrist; quiet vibrations and text reminders begin. The embedded training video helps get them acclimated!

Step 3: Collect

Data, including focus, attention, and other biometric data, is collected actively through the user's response (simple screen tap) and passively via sensors.

Step 4: Learn

Algorithms and AI learn, adjust, and work in tandem with inputs to track focus, attention span, fidgeting, steps, calories burned, and more for a personalized program.

Step 5: Improve

Focus and executive functioning improve throughout the day with custom text reminders. User engagement is rewarded with animations, graphics, and trophies.

Step 6: Sustain

New insights are provided daily as clinicians, educators, and/or caregivers receive notifications on the app and the user on the device.

Ready to pre-order? It's easy!

Here are your two options:

A103000457254

Revibe Subscription

TWO YEARS

\$619(CAD)/year

Includes one Samsung-based device and Revibe application, along with unlimited use for two years. This item includes free damaged device replacement for two years. A second charge of \$619.00 (CAD) will be billed at the beginning of year two.

*Volume discounts are available for the two-year purchase!

5- 14 subscriptions: \$589.00(CAD)/year

15+ subscriptions: [Contact your Assessment Consultant](#)

A103000457271

Revibe Subscription

ONE YEAR

\$699(CAD)/year

Includes one Samsung-based device and Revibe application, along with unlimited use for one year.
