

WISC[®]-V Integrated

OVERVIEW

Administer to:

Individuals 6:0–16:11

Qualification Level:

C

Completion Time:

Varies by selected subtest

Publication Date:

2015

Gain a deeper understanding of cognitive processes impacting a child's WISC-V performance

Designed to help you develop appropriate interventions or treatments, The Wechsler Intelligence Scale for Children[®]—Fifth Edition, Integrated (WISC-V Integrated) combines the WISC-V with optional, process-oriented subtests to investigate a child's WISC-V performance.

Use the WISC-V to obtain the five primary index scores. Then, use only the subtests you need from the WISC-V Integrated to gain further information on specific domains to go deeper and understand a child's WISC-V performance, cognitive strengths and weaknesses, and problem solving strategies.

- Offers a range of subtests—choose only those that help you answer your referral question and understand WISC-V results
- Provides adapted versions of the WISC-V subtests to help you assess children with special needs
- Allows you to refine hypotheses regarding why a child may have difficulty in a specific cognitive area

WISC-V Integrated subtests include:

- Similarities Multiple Choice
- Vocabulary Multiple Choice
- Picture Vocabulary Multiple Choice
- Information Multiple Choice
- Comprehension Multiple Choice
- Block Design Multiple Choice
- Figure Weights Process Approach – new!
- Arithmetic Process Approach
- Written Arithmetic
- Sentence Recall – new!
- Spatial Span
- Coding Recall
- Coding Copy
- Cancellation Abstract – new!

Use the WISC®-V Integrated to help:

- Understand a child's WISC®-V performance when significant and unusual discrepancies are observed across subtest or index scores.
- Understand changes in a child's profile of cognitive strengths and weaknesses over time (e.g., differences in subtest or index scores relative to a previous evaluation).
- Identify cognitive processing strengths and weaknesses in students with specific learning disabilities in order to facilitate diagnostic formation and intervention planning.
- Assess for cognitive processing difficulties in children with psychiatric issues or neurodevelopmental disorders (e.g., ADHD) and recommend appropriate interventions.
- Investigate the impact of brain injuries and neurological/medical conditions related to children's cognitive functioning.
