

There are **no shortcuts** to better student behaviour, but there is **a better path!**

The **Review360**® approach to improving student behaviour is based upon established research that demonstrates a positive systematic approach to behaviour can result in an improved learning environment and better outcomes for students with behavioural issues.

This step-by-step process is the foundation of **Review360**, the only behaviour management solution to work across multiple tiers of intervention.

We Know What Works With Behaviour

Review360 helps to implement what works in a practical and efficient manner.

- Improve outcomes for students with behavioural problems.
- Promote consistent implementation of districts' required behavioural practices and responses.
- Simplify & systemize collection of office referral data and student behaviour progress data.
- Provide timely online professional development for teachers and administrators in the area of classroom and school-wide behaviour management.

The foundation of **Review360** includes **five steps** along the path for better student behaviour: **track**, **aggregate**, **analyze**, **intervene**, and **communicate**.

5 Communicate

The final step on the path is **communicating student actions and resulting progress**. Good communication among teachers, administrators, and parents fosters cooperation, resulting in continuity of services, consistency for the students, and an improved, positive learning environment.

1 Track

The path to better student behaviour starts with **observing and identifying student behaviour**. Review360 provides a behavioural management solution with easy-to-complete reporting forms. The forms' ease of use promotes regular progress tracking of students by teachers and administrators. They also ensure consistency in data reporting.

2 Aggregate

To gain a more complete picture, you need a tool for **compiling and evaluating student behavioural information from teachers and administrators**. Review360 makes this simple by organizing behavioural data in a centralized database, easily accessible to teachers and administrators. We make evaluation efficient by automatically providing important indicators such as occurrences of special incidents, specific behavioural objectives, and rates of inclusion.

3 Analyze

To help teachers and administrators better understand individual students and issues leading to poor behaviour, we provide a tool and method for **analyzing the data you have tracked and aggregated**. With a complete picture of their behaviour, development of an appropriate intervention plan for each student becomes clear.

4 Intervene

The key to improved student behaviour is **implementing an effective and empirically supported behavioural solution and tracking student progress**. Review360 prepares teachers with practical strategies and resources that fit the student's profile. There is also a progress monitoring tool that is consistent with district protocols, yet flexible to meet individual campus or student needs.
