

Discover the
Power!

**More control. More flexibility.
More comprehensive than ever.**

More critical insights into a child's cognitive abilities.

The WISC-V^{CDN} gives you access to more subtest content, resulting in a broader view of the child's cognitive abilities and increased interpretive power. New subtests are targeted to common reasons for referral of children, such as the presence of a specific learning disability, as well as special clinical situations, such as evaluations of children who are English language learners.

- Separate visual spatial and fluid reasoning composites
- New measures of naming facility (rapid automatized naming) and associative memory to evaluate cognitive processes relevant to learning disabilities
- New measures of visual spatial ability, fluid reasoning, and visual working memory
- New ancillary scores for specific clinical situations
- Increased options for a flexible, customized assessment

Q-interactive Digital Administration

For the first time, WISC is available in two formats: the traditional pencil-and-paper test and the new digital format on Q-interactive™. These options provide even more convenience, control, and flexibility. The revolutionary digital version puts the power of WISC-V^{CDN} on your iPad.

www.helloq.ca

More efficient and user-friendly.

The WISC-V^{CDN} empowers you with more control and flexibility by increasing construct coverage but not adding to testing time. Flexibility in the revised structure provides a Full Scale IQ with fewer subtests, allowing more time to utilize other subtests designed for specific clinical situations.

- Simplified instructions with reduced vocabulary level
- Reduced testing time to produce five index scores
- Modernized item content and visual stimuli
- Shorter discontinue rules
- Refined scoring criteria

More evidence of reliability, validity, and clinical utility.

The WISC®-V^{CDN} is not tied to just one theory. We've utilized contemporary research on intelligence theory, neuropsychology, cognitive neuroscience, and clinical practice to produce this latest revision.

- Basic structure revised to yield five factor-based index scores
- Strengths and weaknesses available at both the index and subtest levels
- Additional link to achievement through studies with both the **WIAT®-III^{CDN}** and the **KTEA™-3** (U.S. norms only)

Overview

Administer to:

Children aged 6:0-16:11

Completion Time:

FSIQ: ~45 minutes

Primary subtests: ~60 minutes

Administration:

Paper-and-pencil or Q-interactive

Scoring:

Q-global™ web-based scoring,
hand-scoring

Qualification Level: C
