

The Basics of Brown EF/A Scales

BROWN
EXECUTIVE FUNCTION / ATTENTION
SCALES

ADHD affects roughly 5% to 7.5% of children and adolescents, and 3% to 5% of adults worldwide.

Brown EF/A Scales is designed to evaluate executive functions related to ADHD in individuals ages 3 years and older.

Standardization:

- **270 examiners and 30 sites across 45 states** participated in the standardization
- Based on a national sample of **1,950 Parent, Teacher, and Self-Report Forms** collected from the general population
- Reliability and validity was further established by a **clinical sample of 359 individuals** who were diagnosed with ADHD

Reliability & Validity:

- Internal consistency coefficients ranged from **.74 to .98** for the standardization sample and **.70 to .97** for the clinical sample
- 1- to 4-week test-retest reliability coefficients ranged from **.71 to .95**
- Inter-rater reliability coefficients ranged from **.32 to .72**
- **Correlated with other measures**
 - BASC-3
 - BRIEF2
